

Financial Transactions Dashboard

Project Overview • Power BI Analytics Report

Project Overview

This project delivers an interactive Power BI dashboard built to analyze over 13 million financial transaction records. It was designed to help stakeholders understand customer behavior, revenue performance, transaction methods, and merchant activity through a clean, multi-page analytical experience.

The workflow combined data cleaning and transformation in Power Query, custom measures built with DAX, and a relational data model connecting customers, cards, merchants, and transactions — enabling fast, flexible exploration across every page of the report.

13M	\$571.84M	\$42.98	1K
Transactions	Total Revenue	Avg. Transaction	Customers

Dataset Summary

The underlying dataset captures granular, transaction-level financial activity across a large customer base, including demographic, card, and merchant details used to power every visual in the dashboard.

Attribute	Description
Volume	13,000,000+ individual transaction records
Customer Base	~1,000 unique customers
Time Span	Multi-year transaction history
Customer Fields	Age, gender, income group, credit score, retirement status
Card Fields	Card brand, card type, transaction/payment method
Merchant Fields	Merchant category, merchant city, merchant state
Transaction Fields	Transaction amount, transaction type, transaction date

Dashboard Pages

1. Executive Dashboard

A high-level summary page for quick decision-making, surfacing headline KPIs and top-line revenue breakdowns.

- KPI Cards (Transactions, Revenue, Avg. Transaction, Customers)
- Revenue by Card Brand
- Revenue by Merchant Category
- Revenue by Gender

- Transaction Type Distribution

2. Customer Analysis

A deeper look into customer demographics and financial profiles to identify high-value segments.

- Revenue by Age Group
- Credit Score Analysis
- Income Group Analysis
- Gender Analysis
- Retirement Age Analysis

3. Transaction Analysis

A granular view of transaction trends, geography, and payment behavior.

- Revenue Trend
- Merchant State Analysis
- Merchant City Analysis
- Transaction Method Analysis
- Card Brand vs. Card Type

Key Insights

- Credit cards generate the largest share of revenue across nearly all merchant categories, reinforcing their role as the primary payment method.
- Revenue concentration varies meaningfully by age group, highlighting specific customer segments as priority targets for engagement and retention.
- A small number of merchant states and cities account for a disproportionate share of total transaction volume, pointing to key regional hubs.
- Credit score and income group both show a clear relationship with spending behavior, useful for risk and marketing segmentation.
- Transaction method mix differs by card brand and type, offering direction for payment-partner and product strategy.
