Financial Transactions Dataset

This document describes the fields used in the Financial Transactions Dashboard, grouped by category. The dataset contains 13M+ transaction-level records linked to approximately 1,000 unique customers.

Customer Fields

customer_id	Unique identifier for each customer
age	Customer's age at time of transaction
age_group	Customer age category (e.g., 18–25, 26–35, 36–50, 51–65, 65+)
gender	Customer gender (Male/Female)
income_group	Customer income bracket (e.g., Low, Medium, High)
credit_score	Customer's credit score, used to assess creditworthiness
retirement_age	Flag or value indicating whether the customer has reached retirement age

Card Fields

card_brand	Card network issuing the card (e.g., Visa, Mastercard, Amex, Discover)
card_type	Type of card (e.g., Credit, Debit, Prepaid)
payment_method	Method used to complete the transaction (e.g., Chip, Swipe, Online)

Merchant Fields

merchant_category	Type/category of merchant (e.g., Grocery, Retail, Travel, Dining)
merchant_city	City where the transaction took place
merchant_state	State where the transaction took place

Transaction Fields

transaction_id	Unique identifier for each transaction
transaction_date	Date the transaction occurred
amount	Transaction amount (in USD)
transaction_type	Nature of the transaction (e.g., Purchase, Refund, Withdrawal)

Notes

- All monetary values are in USD.
- age_group, income_group, and credit_score bands power the Customer Analysis page of the dashboard.
- merchant_city and merchant_state drive the geographic breakdowns on the Transaction Analysis page.
- Column names above reflect the logical dataset schema; actual source column names may vary slightly depending on the raw data file.
